KundenrezensionenHilfreichste Kundenrezensionen0 von 0 Kunden fanden die folgende Rezension hilfreich. fantastisch, spannend, auftrttelnd; ein Lehrstck vom KlimawandelVon sileneEin sehr spannender Roman, der mit viel Sachkenntnis und auch mit hohem Respekt sowie groer Achtung und Liebe fr das Land China und seine Menschen geschrieben ist. Auftrttelnd und faszinierend (Was fr ein gewaltiger Damm! Was hat China dort geleistet!), aber

durchaus auch erschreckend sind die Schilderungen über den Drei-Schluchten-Staudamm und die gewaltigen Folgen der Jangtsefluten. Erstaunlich, was wir in Deutschland alles nicht wissen! Sehr interessant sind die politischen, wirtschaftlichen, militärischen und sozialen Szenarien. Die Handlung ist zudem eigentlich auch ein globales Lehrstück der Folgen des Klimawandels, die in anderer Form, in anderen Dimensionen auch woanders auftreten können und uns letztlich alle betreffen werden. Eine Warnung, die man ernst nehmen muss. Das ist kein unrealistisches Zukunftsszenario mehr, sondern zeigt durchaus mögliche Konsequenzen auf! Sehr liebevoll, wenn auch sehr zurückhaltend bis sparsam gezeichnet sind die menschlichen Charaktere. Aber ich mag auch die Katze Mo Fa. Ein wundervolles, nachdenklich machendes und mitreißendes Buch. Das also ist auch China, faszinierend und (Ehr-) Furcht erweckend zugleich.

Kurzbeschreibung What happens when a dam breaks is known. What happens when the biggest dam in the world will break is hard to imagine. The unimaginable catastrophe that the Three Gorges Dam can trigger is not discussed. Critics are silenced and only praise for the new Chinese Wall is tolerated. The negative effects - earthquakes, landslides, droughts and floods are explained as natural. Until the day came when too many unrelated effects came together. The floods and the landslides, the neglect in constructions and human error. These are the days when normal people are affected, when politicians try to save themselves and the military prepares for a situation that can destroy the country. The day when the peasants will pay the price again. A dark but realistic scenario that changes China and the world forever.

über den Autor und weitere Mitwirkende Stephan Busch was born in Germany where at the age of seventeen he started to work in the Hotel industry and served in the Military. He has an invaluable and diverse experience sailing up and down the Yangtze River for more than a hundred times while living in China and at the Yangtze river for over ten years. During this time observing the original Yangtze with the annual floods and currents as well as visiting the construction side of the Three Gorges Dam became a fascinating experience. The years that followed showed the positive and many negative effects of the dam once construction was completed. The idea for the book was born when he was on the lower side of the Three Gorges Dam at the day of the 2008 Szechuan Earthquake. With 8,0 Magnitude one of the strongest quakes that killed more than 80.000 people. A Quake that shook the biggest dam in the world. Studying Hydro - electrical Dams for many years revealed the catastrophes dams caused not only in China but all over the world. Besides horrific dam breaks it was amazing to discover the impacts dams have on the ecological system and on the people that are directly affected.
